REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

 With retard to independent claim 1, as the closest reference, the Applicant Admitted Prior Art shows an optical disc drive comprising: a case having a circuit board; a tray to have an optical disc mounted thereon, and installed in the case and slidable in and out of the case; a main base coupled to the tray, the main base comprising a spindle motor to rotate the optical disc, a bracket to support the spindle motor, an optical pickup to access the optical disc and a driving motor to drive the optical pickup; a flexible printed circuit comprising a first flexible printed circuit electrically connecting the circuit board and the main base, and a second flexible printed circuit electrically connecting the main base and the tray, a ground pattern is formed on the second flexible printed circuit to ground static electricity, and a base cover coupled to the main base to protect the main base; but fails to show an exposure portion of the ground pattern is formed on an end portion of the second flexible printed circuit, and a contact portion electrically contacting the exposure portion of the ground pattern is formed on the base cover so that static electricity applied to the base cover is grounded.

• With retard to independent claim 6, as the closest reference, the Applicant Admitted Prior Art shows an optical disc drive comprising: a case having a circuit board; a tray to have an optical disc mounted thereon, and installed in the case and slidable in and out of the case; a main base coupled to the tray, the main base comprising a spindle motor to rotate the optical disc, a bracket to

support the spindle motor, an optical pickup to access the optical disc and a driving motor to drive the optical pickup; a flexible printed circuit comprising a first flexible printed circuit electrically connecting the circuit board and the main base, and a second flexible printed circuit electrically connecting the main base, a ground pattern is formed on the second flexible printed circuit to ground static electricity, and a base cover coupled to the main base and coated with an insulation layer to protect the main base; **but fails to show** an exposure portion of the ground pattern is formed at an end portion of the second flexible printed circuit and is exposed outwardly to ground static electricity, wherein a contact portion of the base cover is bent toward the exposure portion of the ground pattern and a cut surface of the contact portion is not coated with the insulation layer to allow electricity to flow from the contact portion to the exposure portion of the ground pattern.

• Applicant asserts: "the present invention to provide an optical disc drive in which the number of components is reduced so that cost is reduced and a static electricity removing function is improved" (Specification, p. 3).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Tianjie Chen whose telephone number is 571-272-

7570. The examiner can normally be reached on 8:00-4:30, Mon-Fri.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Hoa Nguyen can be reached on 571-272-7579. The fax phone number for

the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR

only. For more information about the PAIR system, see http://pair-direct.uspto.gov.

Should you have questions on access to the Private PAIR system, contact the

Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like

assistance from a USPTO Customer Service Representative or access to the automated

information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
